The ECLIPSE 2L double lumen balloon catheters are intended for use in the peripheral vasculature and neurovasculature for temporary occlusion. The balloon catheters provide temporary vascular occlusion which is useful in selectively stopping or controlling blood flow and for the vasospasm treatment. The balloon catheters also offer balloon assisted embolization of intracranial aneurysms. They are also indicated for use in the peripheral vasculature and neurovasculature for administration of diagnostic agents (contrast solution) and therapeutic agents (embolization materials compatible with the inner diameter of the balloon catheters ECLIPSE 2L). eclipse^{2L}

double lumen
balloon catheter

eclipse^{2L}

Exclusive design bringing unequalled features

Designed for use in the peripheral vasculature and neurovasculature, provide temporary vascular occlusion, vasospasm treatment, balloon assisted embolization, administration of diagnostic agents (contrast solution) and therapeutic agents

5 times faster deflation

aneurysm treatment

Variety of tip lengths

For better stability and navigation

Eclipse 2L has a 7mm-long tip distal to the balloon

Eclipse 2L is also available with a short distal tip (Short Nose version)

Flat catheter concept - ease of use

Inflation / deflation time
five times quicker than competition¹

High visibility
as balloons can be filled up with 100% contrast media²

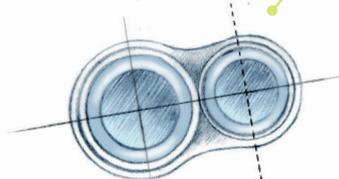

Navigation
improved thanks to the hydrophilic coating.
Eclipse 2L can go inside artery of 1.5mm

Safety - easy valve

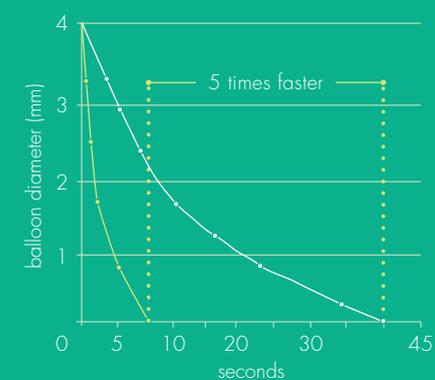

Easy purging system

Safety increased thanks to a reduced risk of blood aspiration

Working lumen
I.D. .017"

Balloon deflation time comparison

● Eclipse 2L ● Competitor

Large applications

Remodeling

Eclipse 2L can be used in parallel with a coiling microcatheter VASCO+10 in a single 6F guiding catheter (FARGOMAX6F)

Leo+ Baby

Squid

DMSO Compatible

Coils
